10. Eagle Eye Network (formerly Uncanny Vision)

About : Our solution is to make the camera intelligent. If the camera can process what it sees and raise a real-time alert, theft can be prevented in a larger number of cases.

Uncanny Surveillance is a software product that enables IoT devices (connected Surveillance cameras) to "see" and "understand" their environment instantly using AI/Deep Learning algorithms.

Our value proposition is to run all the vision software On-Device on the camera and only send important information/alerts

12. Vyorius

About: Vyorius is democratizing robotic operations and placing itself as a backend layer for unmanned mobile robotics. Vyorius provides solution to the bottleneck of unmanned operations which is poor visibility, disconnected systems, large data, down time and security.

Vyorius aims to disrupt the unmanned space by an AI enabled hardware agnostic universal plug and play digital architecture to allow enterprises run operations that remain transparent, scalable, secure and cost efficient.

17. Hoverrobotix

About: We bring you a wide range of amazing Artificially Intelligent Robots called hoverboard and Segway. HoverRobotix Mobility devices are the futuristic solution to the environmental pollution problem with its Hoverboards. No matter which corner of India you belong to, we try to deliver your dream wheels at the earliest. Get in touch with us today to move around on a vehicle that is an epitome of style, convenience and luxury!
